PROFILE

Front-End Developer focused on Next.js and React. **Sole front-end developer at the IT Department of the Municipality of Río Cuarto**, responsible for the interfaces of public platforms. I work on legacy systems with no responsive support, migrating them to modern, accessible interfaces. Particularly interested in user experience and building products people can use without help.

PROFESSIONAL EXPERIENCE

Front-End Developer | 04/2025 - Present
Municipality of Río Cuarto, IT Department, Río Cuarto, Córdoba

- Sole front-end developer in the department: responsible for the interfaces of the Municipal Portal, the EMOS website (municipal water utility) and internal systems.
- Redesigned the Municipal Portal, a platform with **~65,000 unique visitors and ~72,000 sessions in 30 days (as of Oct 2026)**, replacing a legacy site with no mobile support and navigation fragmented across dozens of unprioritized entry points.
- Migrated to Next.js with a reusable component architecture, replacing fixed-width markup with responsive layouts.
- Redesigned the EMOS institutional site, prioritizing access to services and procedures (online payments, service requests, digital billing) over informational content.
- Integrated APIs built by the backend team and coordinated with the Press and Communications departments on content workflows.
- Applied accessibility criteria: semantic hierarchy, contrast, keyboard navigation and visible focus states.
- Built a test suite with Vitest and React Testing Library covering components, utilities and context providers of the Portal.
- Set up a CI pipeline in GitHub Actions that runs tests and build on every push and pull request.

Technologies: Next.js, React, SCSS, Vitest, React Testing Library, GitHub Actions, Docker, Git.

FEATURED PROJECTS

Postas - POS System
Point-of-sale system for retail businesses, an in-development product of my own built with a backend developer and designed to be sold by subscription.

- Front-end development: sales, inventory, cash register, suppliers, user management and reporting modules.
- Workflows optimized for counter speed: keyboard shortcuts, immediate visual feedback and touch-screen support.
- Interface designed so a new employee can operate it without prior training.

Technologies: Next.js, React, JavaScript, Bootstrap.

Estudio Jurídico Agustín Sánchez - Freelance
Institutional website for a law firm. Client had no digital presence and was losing inquiries due to a lack of contact channels.

- Full design and development, from structure definition through production deployment.
- Conversion-oriented interface: multiple visible contact paths and team presentation to build trust.

Technologies: React, Vite, Tailwind CSS, JavaScript.

TECHNOLOGIES

Front-End: Next.js (App Router, Server Components, Server Actions), React, TypeScript, JavaScript, Astro, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap

Testing: Vitest, React Testing Library

CI/CD: GitHub Actions (tests and build on every push)

Practices: Responsive design, Accessibility, Performance, Component design, Unit and component testing, UI/UX

Tools: Git, GitHub, Docker, Vercel, Figma

Academic exposure: Python, Django, PostgreSQL (coursework, no professional experience)

EDUCATION

Associate Degree in Software Development - ITEC Río Cuarto | Graduated 2026

LANGUAGES

Spanish (native) | English (B2)
